

MYCODIM

MycoDim is a broad spectrum, contact foliar fungicide that prevents a variety of diseases on ornamentals, trees, potted plants, fruits, vegetables, and turfs. It can be applied with normal spray equipment using suggested volume of water to ensure complete coverage of all stems and foliage.

MycoDim is a water soluble free flowing powder. It has no phytotoxicity, at recommended dosages. MycoDim can be used for organic disease management. It has been very efficient for the management of powdery mildew, and other fungal diseases of plants. The presence of neem ingredients in the composition provides repellent effect to many pests.

Offered in package of 50g & customizable sizes.
